

Structural Medical Intelligence Oncology (SMI-O)

Documentation Relationship Map Edition 1.0

Creator Lucio Taddeo

Date July 4, 2026

Documentation Classification: Public Conceptual Access

Purpose

The relationship map defines the conceptual relationships among all documents within the Structural Medical Intelligence Oncology (SMI-O) Edition 1.0 documentation family. It expresses how each document contributes a distinct conceptual layer and how these layers remain structurally coherent, aligned, and nondrifting across the Edition 1.0 environment. The relationship map does not generate meaning or alter meaning; it provides the conceptual overview through which the Edition 1.0 documentation family may be understood as a unified conceptual system.

Scope

The relationship map describes the Edition 1.0 documentation family, including the Structural Positional System, the SPS Meaning Tables, the White Paper, the Conceptual Structural Platform Specification, the Operational Platform Specification, the Metadata Tagging Framework and Market Integration Map, the Boundary Artifacts, and the Technical Specification. Scope is limited to describing conceptual relationships and does not define meaning, positional meaning, platform meaning, metadata rules, or boundary constraints.

Definitions

- **Documentation family:** The complete set of Edition 1.0 documents that together define the conceptual, positional, platform-level, metadata, boundary, and architectural layers of the SMI-O system.
- **Conceptual layer:** A document that defines meaning, interpretive boundaries, or conceptual tendencies.
- **Positional layer:** A document that defines positional system structure or positional meaning.
- **Platform layer:** A document that defines conceptual or operational platform meaning.
- **Metadata layer:** A document that defines contextual metadata structures and neutrality rules.

- **Boundary layer:** A document that defines consolidated conceptual, positional, and platform-level boundary statements.
- **Architectural consolidation layer:** A document that defines how conceptual meaning, positional system structure, positional meaning, platform-level meaning, and metadata contexts remain coherent and nondrifting across the Edition 1.0 environment.

Two-Step Conceptual Precursor: Structural Grammar and Meaning Acquisition

Step 1 — Meaning requires grammar

Human meaning acquisition follows a universal cognitive sequence. In early childhood, letters appear as meaningless shapes, words appear as unfamiliar clusters, and sentences appear as uninterpretable strings. Only when grammar is introduced does meaning become accessible, and only when grammar becomes shared does meaning become universal. Meaning does not reside in the symbol itself; meaning emerges from the structure that governs the symbol. Grammar is the mechanism through which structure becomes meaning.

Step 2 — SMI-O meaning follows the same structural sequence

The SMI-O architecture mirrors this cognitive pattern. The positional system provides the structural alphabet. Positional meaning provides the first layer of semantic formation. Conceptual meaning provides relational meaning. Platform meaning provides the governing grammar. Architectural consolidation provides continuity, stability, and nondrifting interpretation. Meaning becomes universal only when the grammar is fixed, edition-locked, and shared across all observers. Observers cannot generate, validate, or reinterpret meaning; meaning must be given, not invented. This grammar-first requirement forms the conceptual foundation through which the Edition 1.0 documentation family may be understood as a unified conceptual system.

SMI-O Edition 1.0 Documentation Family

- SMI-O Structural Positional System (SPS) — Edition 1.0
- SMI-O Structural Positioning System (SPS) — Meaning Tables — Edition 1.0
- SMI-O White Paper — Edition 1.0
- SMI-O Conceptual Structural Platform Specification — Edition 1.0
- SMI-O Operational Platform Specification — Edition 1.0
- SMI-O Metadata Tagging Framework & Market Integration Map — Edition 1.0
- SMI-O Boundary Artifacts — Edition 1.0
- SMI-O Technical Specification — Edition 1.0
- SMI-O Documentation Relationship Map — Edition 1.0

SMI-O Edition 1.0 Documentation Relationship Map

The Structural Medical Intelligence Oncology (SMI-O) Edition 1.0 documentation family defines a unified conceptual architecture composed of multiple coordinated documents. Each document expresses a distinct conceptual layer, and together they form the Edition 1.0 conceptual system. The relationship map describes how these documents align, integrate, and maintain structural coherence across the Edition 1.0 environment.

1. SMI-O Structural Positional System (SPS) — Edition 1.0 Defines the Oncology positional system architecture, including positional system structure, positional organization, and edition-locked positional boundaries. The SPS establishes the structural foundation of the Edition 1.0 conceptual system.

2. SMI-O Structural Positioning System (SPS) — Meaning Tables — Edition 1.0 Define edition-locked positional meaning for all positional structures established in the SPS. These tables provide the positional meaning layer within the Edition 1.0 architecture.

SMI-O Documentation Relationship Map
Edition 1.0

3. SMI-O White Paper — Edition 1.0 Defines Oncology conceptual meaning, interpretive boundaries, and conceptual tendencies. The White Paper establishes the conceptual meaning layer of the Edition 1.0 system.

4. SMI-O Conceptual Structural Platform Specification — Edition 1.0 Defines Oncology-specific conceptual platform meaning and conceptual platform boundaries. This document expresses the platform-level meaning layer within the Edition 1.0 architecture.

5. SMI-O Operational Platform Specification — Edition 1.0 Defines operational platform structures that remain conceptually aligned with the conceptual platform. This document expresses the operational alignment layer of the Edition 1.0 system.

6. SMI-O Metadata Tagging Framework & Market Integration Map — Edition 1.0 Defines contextual metadata structures and the rules governing metadata neutrality. This document expresses the metadata contextual layer within the Edition 1.0 architecture.

7. SMI-O Boundary Artifacts — Edition 1.0 Define consolidated conceptual, positional, and platform-level boundary statements that govern interpretive limits across the Edition 1.0 documentation family.

8. SMI-O Technical Specification — Edition 1.0 Defines the architectural consolidation layer through which conceptual meaning, positional system structure, positional meaning, platform-level meaning, and metadata contexts remain coherent, aligned, integrated, stable, bounded, neutral, and continuous across the Edition 1.0 conceptual system.

9. SMI-O Documentation Relationship Map — Edition 1.0 Defines the conceptual relationships among all Edition 1.0 documents and provides the orientation layer through which the documentation family may be understood as a unified conceptual architecture.

Recommended Reading Order

1. Documentation Relationship Map
2. Structural Positional System (SPS)
3. SPS Meaning Tables
4. White Paper
5. Conceptual Structural Platform Specification
6. Operational Platform Specification
7. Metadata Tagging Framework & Market Integration Map
8. Boundary Artifacts
9. Technical Specification
